TIPP OIL Biogenic Oil Binder

Description

TIPP OIL Biogenic Oil Binder is an extremely efficient biogenic oil binder whose absorption capacity (absorption and holding capacity) has been tested by the Materials Testing Office. It is a universal biogenic oil binder that is particularly suitable for absorbing all oils, fuels and a wide range of chemicals (see list of chemicals).

Advantages:

Binds spillages quickly and effectively and can be reabsorbed without leaving any residue. It can be reused several times until it is completely saturated.

Absorbed substances are effectively encapsulated and are not released even under increased pressure. can be used both preventively and in the event of acute leaks or emergencies.

has no long-term visual or physical effects on the surfaces of the locations where it is used.

is easy to handle due to its low weight.

Utilisation class

Biogenic Oil Binder fulfils the requirements of the German Federal Ministry for the Environment, Nature Conservation and Nuclear Safety for oil binding agents:

Type W - Water

Type R - commercial, industrial, road, traffic areas

After application on traffic areas, up to 96% of the original skid resistance can be restored.

Environmental compatibility

- It is an organic biogenic oil binder that consists of 100% hydrophobic biogenic sediment and contains no artificial additives.
- The occupational health and environmental safety has been tested by the Hygiene Institute of the Ruhr area.
- The Biogenic Oil Binder is 100% biodegradable and has no negative impact on the environment, i.e. it is absolutely non-toxic for humans, animals and plants.

Disposal

- Cost-effective disposal of the used binder due to its low weight.
- It has a very good calorific value and can therefore be thermally utilised without any problems.

Storage

It should be stored in a dry place (LKG 11). Shelf life at least 5 years.

Safety instructions

None

The occupational health safety has been tested by the Hygiene Institute of the Ruhr area.

Tipp Oil Biogenic Oil Binder consists of 100% hydrophobic biogenic sediment. Slight variations in some technical data may occur due to the nature of the product. The performance depends on the substances to be absorbed - mechanical incorporation may be necessary. The applicable waste legislation must be observed during disposal.
